

JASOPELS SLICING MACHINE T3

A family of experienced mink breeders from Bukowiec in Poland, Grzegorz and Szymon Musiał, has been engaged, for many generations, in breeding foxes first, and minks later. Grzegorz and Szymon Musiał have switched to Jasopels products a long time ago. Jasopels Slicing Machine T3 is one of the products they use. "The machine is very fast and precise", the mink breeder says. And he adds: "I don't think it would be possible to make this product easier to use than it is".

Pelting is one of the most difficult parts of making a good product, and so much depends on it. And you decided to trust Jasopels solutions.

Yes, this is true. This is a very complicated process with many factors affecting it. You can work for a whole year and then spoil everything at the end, so we needed a machine we could rely on.

There are other solutions available. Why did you choose Jasopels slicing Machine T3?

We didn't take the decision quickly – we did a lot of research first. We had access to products of other companies, but in the end we put our trust in the Jasopels brand. I must say we have not been disappointed.

What differences did you spot?

When compared to products of other manufacturers, the Jasopels Slicing Machine T3's reset system is highly efficient. In Jasopels products it works very quickly and you can restart the machine after only a short moment. Thanks to that there are no unnecessary stop.

Did the opinion of other mink breeders influence your decision?

Certainly. The new version of the Jasopels Slicing Machine T3 is based on the previous reliable machines, which enjoyed good reviews among mink breeders.

What would you say the advantages of Jasopels Slicing Machine T3 are?

Firstly, it's very fast and precise. The laser function is also important – thanks to it our employees know exactly what to do, so as not to

ruin the skin. In this work, attention to details is very important, and Jasopels takes care of the fine details. There are also no problems with the product's servicing and maintenance because we can contact the technical staff almost instantly, and the help offered is very solid.

Would everyone be able to operate this machine?

I don't think it would be possible to make this product easier to use than it is. The inbuilt computer is very easy to use and intuitive. It is important for us that no long training is needed to achieve full proficiency when operating the machine. Thanks to that every of our employees works effectively on this machine. You might say that the perfection of this machine results from human laziness as it's built in a way that the person using it practically does not need to use muscle force. It's clear that this product was created with humans and minks in mind.

Would you recommend the Jasopels Slicing Machine T3 to other mink breeders?

Definitely! We bought a product which met all our expectations – it's easy to operate, intuitive, precise, fast and well-built. This contributes to the fact that the performance of this machine is recommendable. If we ever need to invest in another slicing machine, it will definitely be a Jasopels product.

Jasopels has been operating for more than 20 years, but your family has been breeding minks much longer.

We have been breeding minks for three generations now. Jasopels products have been used practically from the birth of our brand. I must say that we have never been let down by this company's products. That is why we always use Jasopels products and solutions.

- **Large capacity**
- **cutting precision**
- **possibility to adjust each process cycle**
- **easy operation**
